Excerpt: . follows with regard to the applicability of the typical view:2 The method here 1 Chancel arrived in a similar manner at the same result, independently of Williamson (cf. Comptes Rendus, vol. xxxi. p. 521). a Jowrn. Chem. Soc., vol. iv. p. 239. employed of stating the rational constitution of bodies by comparison with water, seems to me to be susceptible of great extension; and I have no hesitation in saying that its introduction will be of service in simplifying our ideas, by establishing a uniform standard of comparison by which bodies may be judged of. His confidence in the possibility of extending the typical idea came out still more strongly upon another occasion,1 when he expressed the opinion that reference to the one type of water sufficed for all inorganic and for the best-known organic compounds; only that in the case of many substances, e.g. dibasic acids, the formula of water must be taken doubled. The views expressed here are also to be found for the most part in Gerhardt s theory of types. The most important result of Williamson s researches consisted, however, not in the one-sided typical mode of explaining the constitution of chemical compounds, but rather in the determination of the true molecular values of organic substances. The methods which he made use of in order to attain this end very soon proved themselves exceptionally productive; they led Gerhardt to the discovery of the acid anhydrides, and Wurtz to that...
