

Churchill's Bomb: How the United States Overtook Britain in the First Nuclear Arms Race

Filesize: 2.89 MB

Reviews

This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, altered the way I believe.

(Prof. Loyce Runolfsson Jr.)

CHURCHILL'S BOMB: HOW THE UNITED STATES OVERTOOK BRITAIN IN THE FIRST NUCLEAR ARMS RACE

Basic Books, 2013. Book Condition: New. Brand New, Unread Copy in Perfect Condition. A+ Customer Service! Summary: The Guardian "[A] dazzling book. Farmelo, prize-winning biographer of the physicist Paul Dirac, recounts this important story with skill and erudition." The London Review of Books "Compelling. The value of Farmelo's book is in its meticulous attention to the contingencies, accidents, uncertainties, inconsistencies and idiosyncratic personalities in the story of how Britain didn't get the Bomb during the war and how it did get it afterwards. It could all have turned out differently -- but it didn't." Nature "The author, a physicist, ranges across Winston Churchill's long career. Farmelo is especially good on the Second World War years, revealing much about the Anglo-American relationship that has been guarded or unclear. Colourful." Kirkus "[A] nicely detailed and balanced record of the British ambivalence toward building an atom bomb in favor of the American effort. A tremendously useful soup-to-nuts study of how Britain and the U.S. embraced a frightening atomic age." Library Journal "Farmelo presents a well-written and deeply researched account of Britain's engagement in atomic research. Farmelo's study provides an excellent assessment of Churchill's role in the British effort and complements Richard Rhodes's classic *The Making of the Atomic Bomb*. A fine addition to the existing literature on the subject." Roger Highfield, Science Museum executive, Daily Telegraph columnist, and bestselling science writer "A riveting, powerful, and timely reminder that high politics is anything but rational. Graham Farmelo vividly reveals how Winston Churchill learned about atomic physics in the 1920s, warned about the imminence of nuclear weapons in the 30s, and yet, paradoxically, squandered Britain's lead in the field during the Second World War." Sir Michael Berry, University of Bristol "What a brilliant and compelling book! Graham Farmelo sensitively and eloquently deconstructs the twists...
