What is Dark Matter? What is Dark Energy? What is the structure of a Black Hole? Why is the rate of expansion of the universe increasing? This book provides answers to these questions and many others by proposing an original approach called Black Marble Theory. It is a simple, elegant, and non-mathematical idea that can be easily understood by a non-technical reader. The fundamental proposition is simply that matter can exist in a different state than the ordinary matter that we can see in the universe. It is called Black Matter. It is produced when all of the space is compressed out of Ordinary Matter by extreme gravity. If there is enough Ordinary Matter to start with, the Black Matter will form a solid sphere called a Black Marble. Black Marbles form the center of Black Holes. From this basic idea, the theory follows logical steps that provide clear and plausible explanations of the most profound mysteries that confront Physics today. It explains the structure of the Black Hole, the formation of galaxies, and the Big Bang itself! The theory also provides a surprisingly simple explanation of the source and fuel of the Dark Energy that propels the expansion of the universe. In an hour of easy reading, it will become clear. Why our universe is just what it appears to be.
