Although credited with the invention of practical devices like the water-screw, catapults and grappling devices, compound pulley systems, and a model for explaining solar eclipses, Archimedes viewed these mechanical innovations merely as diversions of geometry at play. In this complete works, including his renowned Method, Archimedes addresses such topics as: the ratio of the areas of a cylinder and an inscribed sphere, the measurement of a circle, the properties of conoids, spheroids, and spirals, and the quadrature of the parabola. His ingenious work on spheres, cylinders and floating objects have gained Archimedes the recognition, along with Euclid and Apollonius, as one of the three great mathematicians of the ancient world.
